## 3 Installation

Navigate into your ILIAS web root path.

```
mkdir -p Customizing/global/plugins/Services/UIComponent/UserInterfaceHook  
cd Customizing/global/plugins/Services/UIComponent/UserInterfaceHook  
git clone https://git.studer-raimann.ch/plugins/dclPictureExport.git  
cd dclPictureExport  
php composer.phar install
```

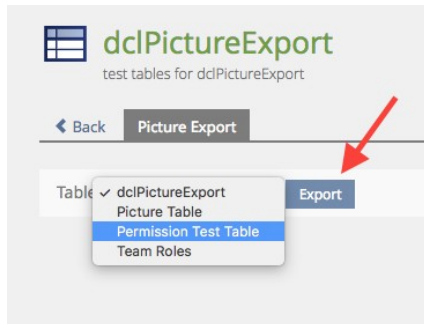

## 4 Usage of the Plugin

### 4.1 Picture Export

1. Navigate into a DataCollection object.
2. Navigate to the tab named "Picture Export"

3. Select the table which should be exported by the plugin.

4. Press the export button to start the picture export.

*Hint: The first visible tableview will be exported.*

## 4.2 Configuration

To configure the plugin, navigate inside the main menu to: **ADMINISTRATION > Plugins**. Look for the Plugin (dclPictureExport) and choose *Configure* from the *Actions*-Menu on the right side of the table.

Inside the field *DataCollections* (see Screenshot below), you can enter (comma-separated) Ref-IDs of the DataCollections, in which you want the plugin to be active, i.e. in which the picture export tab should be shown. If no IDs are defined, the export tab will be shown in every DataCollection.
